

Chapter 9. What is the geographic distribution of people living with HIV/AIDS in Massachusetts?

Chapter 9 provides a summary of the geographic distribution of the HIV/AIDS epidemic in Massachusetts. HIV and AIDS prevalence data are presented in summary tables for each Health Service Region as well as for the 15 cities with the highest number of people living with HIV/AIDS (prevalence), and the highest HIV/AIDS prevalence per 100,000 population. [Note: two cities in the top 15 ranking by prevalence per 100,000 were omitted from this analysis for protection of confidentiality because the total number of people living with HIV/AIDS in each city was less than 50, and the total populations of the cities were less than 20,000.] These analyses provide a point of reference for comparison to the statewide HIV/AIDS epidemic. However, one must note that the geographic information presented reflects residence at the time of report and not current residence. Therefore the data may not exactly mirror the current regional distribution of people living with HIV/AIDS. Please see Chapters 1 and 4 for figures, bullet points and additional data by Health Service Region. (Please Appendix 5 for a map of the Health Service Regions.)

Section 1. Profiles of People Living with HIV/AIDS by Health Service Region

Table 9.1 People Living with HIV/AIDS by Gender, Race/Ethnicity, Exposure Mode and Current Age: Boston HSR, MA

Data as of 7/1/02

HIV/AIDS
